Please ensure this tracking sheet is completed as a group, as it will be used to monitor your individual participation within the team.

Team Members	Role/ Responsibilty	Email
Mukamukiza MIlliam	Probability Distributions (EM Algorithm)	m.mukamukiz@alustudent,com
Cedric Bigwi Hindura	Gradient Descent (by hand and in Python)	c.bigwihin@alustudent.com
Mukabucyana Dedine	Bayesian Probability	d.mukabucya@alustudent.com

Task Allocation and Tracker

	Task Allocated	Assigned Member	Deadline	Completion Status (Not Started/In Progress/Completed/Did not participate)	Reviewed by Team? (Yes/No)	Comments
	Write the EM algorithm in Python to split the heights into two groups	Milliam	25th Oct 2026	Completed	Yes	Milliam wrote the code from scratch, without a ready-made library. The code starts with a guess for each group, works out the chance that each height belongs to each group, then improves the guess.
	Explain why we should not split at the overall average, and prepare the results table and a test height	Milliam	25th Oct 2026	Completed	Yes	Milliam explained that the two groups overlap, so a straight cut would put many people in the wrong group. The table shows the start and the first two rounds, and the test height gives a chance for each group.
	Choose 2 to 4 positive and 2 to 4 negative keywords, and decide which probability to calculate	Dedine	22nd Oct 2026	Completed	Yes	Dedine chose 4 positive words (excellent, wonderful, amazing, great) and 4 negative words (terrible, awful, boring, worst). The group chose P(Positive | keyword) only, not both.
	Write the Bayes code in basic Python and make the table of prior, likelihood, marginal and posterior	Dedine	24th Oct 2026	Completed	Yes	Dedine used the 50,000 IMDb reviews and only basic Python, with no machine learning libraries. The table covers all 8 words, and a bar chart shows the results. The notebook is uploaded to GitHub.

	Dedine used the 50,000 IMDb reviews and only basic Python, with no machine learning libraries. The table covers all 8 words, and a bar chart shows the results. The notebook is uploaded to GitHub.	Cedric	25th Oct 2026	Completed	Yes	Cedric turned the hand calculations into Python. One graph shows how m and b change, and the other shows how the error goes down. The code answers match the hand answers.
	Upload our own work to the team GitHub repository	Milliam, Dedine,Cedric	25th Oct 2026	Completed	Yes	Each member uploaded their own part from their own account, so the commit history shows everyone's work.
	Combine all parts into one notebook and write the README	Milliam, Dedine,Cedric	25th Oct 2026	Completed	Yes	We put the three parts into one organized notebook and the README that we will be used during the presentation.
	Prepare the PDF of handwritten calculations and the contributions PDF	Milliam, Dedine,Cedric	25th Oct 2026	Completed	Yes	We reviewed the hand calculations together before turning them into the PDF.
	Rehearse the 15-minute presentation	Milliam, Dedine,Cedric	25th Oct 2026	Completed	Yes	We prepared for presentation that we had the next day and submitted our work

Meeting Attendance Log

Meeting Date	Agenda	Facilitator	Attendees	Key Discussion Points	Next Steps	
14 Oct 2026	Understood the assignmen	Milliam Mukamukiza	Cedric, Dedine, Millia	We read the assignment together and looked at the datasets we need to use. We divided the work: Member 1 does EM, Member 2 does Bayes, Member 3 does gradient descent.	Each member starts working on their own part.	

22 Oct 2026	Checked the progress	Cedric Hindura	Cedric, Dedine, Millia	Each member shared how far they had reached on their part.	Finish all parts, submit the assignment on Sunday, and rehearse the presentation.	
25th Oct 2026	Had a final meeting	Dedine	Cedric, Dedine, Millia	We looked through all the work we've done, planned how our presentation will be and submitted our work	Final presentation
